

# Cells 1-3 raw-MC angular-error survival: no angular truncation or 5 deg renormalization

Formal logE\_true selection; Stage-B weight = mc\_weight x Crab-declination theta reweight. Top: 0-20 deg; bottom: full spherical range.

— raw MC, Stage-B weight    - - - raw MC, unweighted    — current full-plane double-King    ..... former 5 deg edge
