

Cells 1-3 full-sphere raw-MC PSF: Rayleigh core + spherical-King tail

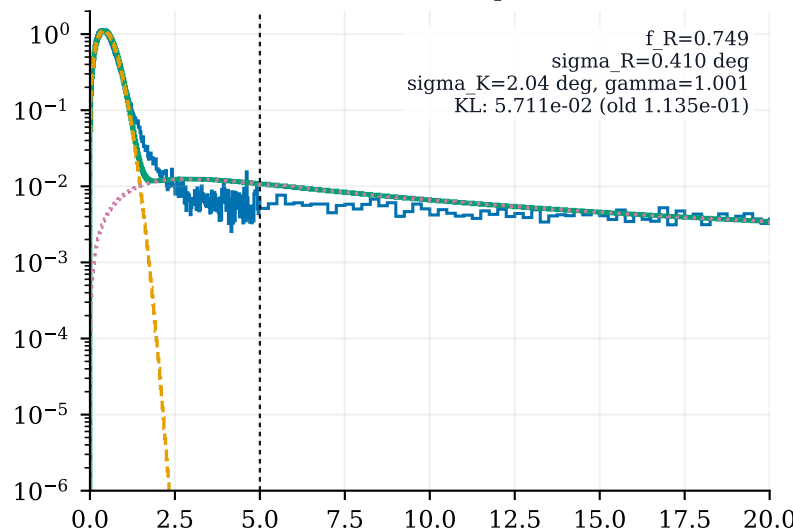

No angular truncation or 5 deg renormalization; weight = mc_weight x Crab-declination theta reweight.

- weighted raw MC
- Rayleigh component
- former 5 deg edge
- new hybrid survival
- Rayleigh + spherical King
- spherical-King component
- empirical survival
- old double-King extrapolation

cell 1: Nhit [100,200), predE [2,2.5)

cell 2: Nhit [100,200), predE [2.5,3)

cell 3: Nhit [100,200), predE [3,3.25)
